Abstract: Potential respondents are owners and operators of coal- and oil-fired electric utility steam generating units (EGUs). The final rule regulates HCl, filterable PM, Hg, and organic HAP from coal-fired EGUs. For oil-fired EGUs, the final rule regulates HCl, HF, filterable PM, and organic HAP. Following initial performance tests, owners/operators of EGUs will be required to demonstrate compliance with emission limits through continuously monitoring PM, Hg, HCl, and HF (oil-fired EGUs) emissions. The final rule includes a work practice standard for organic HAP; the work practice standard requires the implementation of periodic burner tune-up procedures. Respondents will be required to notify EPA of performance tests and CEMS demonstrations, and to maintain records demonstrating compliance with each emission limit and

work practice standard. This information is being collected to assure compliance with 40 CFR Part 63, Subpart UUUUU.

Form Numbers: None.

Respondents/affected entities: Owners and operators of coal and oil-fired EGUs.

Respondent's obligation to respond: Mandatory (40 CFR Part 63, Subpart UUUUU).

Estimated number of respondents: 1,254 (total).

Frequency of response: Initially, occasionally and semiannually.

Total estimated burden: 670,241 hours (per year). Burden is defined at 5 CFR 1320.3(b).

Total estimated cost: \$67,306,156 (per year), includes \$1,685,748 annualized capital or operation & maintenance costs.

Changes in the Estimates: There is a decrease of 30,055 hours in the total estimated respondent burden compared with the ICR currently approved by OMB. These changes are because the standard has been in effect for more than three years and the requirements are different during initial compliance as compared to on-going compliance.

Acting Director,
